EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Claims 1-3 have been canceled, as being directed to a patentably distinct invention.

Applicant's election of species II, received on September 28, 2005, is acknowledged.

Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

In claim 8, 2nd line, the term "above-mentioned" has been deleted.

In claim 8, 3rd line, the term "it" has been deleted.

In claim 8, 4th line, the term "its" has been deleted.

In claim 9, 10th line, the term "energising" has been changed to --energizing-- so as to conform to U.S. spelling.

In claim 9, 11th line, the term "since" has been changed to --from--.

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance:

Applicants claim, among other things, Apparatus for detecting gas combustion adapted to a domestic free-standing gas heater or a water heater provided with a safety valve, a main gas valve and an electronic control unit, the detection apparatus comprising, an mounting bracket for supporting the detection apparatus shaped for fitting on the gas heater or the water heater, a pilot burner with at least one pilot flame for faulty combustion detection, and an igniter incorporated on the support bracket, a thermoelectric generator assembly heated by the pilot flame, supplying through two electric outputs respectively a low voltage for energizing said safety valve, and for detection of combustion deficiencies in the pilot flame, and a higher voltage for powering the main valve and the electronic unit of the gas heater, wherein the thermoelectric assembly is incorporated on said support bracket forming a compact mounting unit with the pilot burner, and includes a flat thermoelectric cell made up with semiconductor P-N junctions, with two sides one hot and one cold, in the form of plates spaced apart from each other, a heat transmitter element licked by the pilot flame and connected to the hot plate, and a heat exchanger connected to the cold plate, wherein the heat transmitter element is formed with a thermal head positioned on the support bracket at a given distance separating it from the pilot burner for the rapid detection of the pilot flame, and with a heat transmission member connected to thermal head separating the flat cell from the flame.

Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Bachinski, Brownell, and Shakun all disclose thermoelectric generators reflecting the general background of the art. Nevertheless, the prior art of record, taken alone or in combination therewith, does not disclose nor make obvious the combination as claimed by applicants.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
